

Digital Citizenship & Online Safety

Six print-and-go lessons that teach elementary students how to be **safe**, **kind**, and **hard to fool** online.

THE SIX LESSONS

Print & go

Sub friendly

READY FOR CLASS. EASY FOR TEACHERS.

Everything you need in one print-and-go pack

- ✓ Teacher notes + student pages for every lesson
- ✓ Skills rubric, six exit tickets and full answer key
- ✓ Family letter and student help sheet
- ✓ Standards alignment for ISTE, CASEL and AASL

Start Here

Six lessons that teach elementary students the habits that keep them safe online, written so that any teacher can run them straight from the page.

What this pack is

- **Six complete lessons** covering the areas students actually get caught by: footprints, passwords, privacy, unkindness, false information, and scams.
- **Every lesson runs from the page.** Teacher notes on one side, student pages on the other. No slides to prepare, no accounts to create, no websites to visit.
- **Print and go.** Black and white printing works. Nothing here breaks if the internet is down.
- **Written for any teacher**, not just the tech teacher. If you have never taught this before, the teacher page tells you exactly what to say and do.

THE THREE-PART SHAPE OF EVERY LESSON

PART	TIME	WHAT HAPPENS
Open	5 to 8 min	A question or a short scenario on the board. Everyone has an opinion, so everyone talks.
Work	20 to 30 min	Students complete the pages. You circulate. The pages carry the content, so you are free to listen.
Land	7 to 10 min	A short share-back and an exit ticket. This is where the rule gets stated out loud.

PRINT SETUP

Student pages are the ones with a **Grades 3 to 5** footer and space to write. Print them single-sided if students will keep them in a folder, double-sided to save paper. Teacher pages are marked **TEACHER** in the top right corner and are not meant for students.

A NOTE ON TONE

These lessons are calm on purpose. Children who are frightened about the internet do not become safer, they become secretive, and secretive is the opposite of what you want. Every lesson ends with something a student can **do**, and the single message running through all six is that telling a trusted adult is always allowed.

What Is Inside

Six lessons, plus everything you need to run them and check what stuck.

THE LESSONS

#	LESSON	THE QUESTION IT ANSWERS	TIME
Lesson 1	Your Digital Footprint	If someone found everything you have ever posted, what would they think you are like?	45 min
Lesson 2	Passwords That Actually Work	What makes a password hard to guess, and why is short and clever worse than long and boring?	45 min
Lesson 3	Private or Public?	Some things about you are nobody else's business. How do you decide which things?	45 min
Lesson 4	Kind Online	Why do words online sometimes hurt more than the same words said out loud?	45 min
Lesson 5	Is It Real?	How can you tell the difference between something true and something that just looks true?	45 min
Lesson 6	Tricks and Traps	What do all online tricks have in common, and what is your first move when you spot one?	45 min

ALSO INCLUDED

SECTION	USE IT FOR
Standards alignment	Dropping into a unit plan or showing a coordinator what this covers.
Pacing options	Running the pack over one week, six weeks, or a single day.
Before you teach	Two pages of guidance on disclosures, privacy, and what not to ask students to share.
Skills rubric	A single-page rubric that works across all six lessons.
Exit tickets	Six short tickets, one per lesson, cut-and-go.
Family letter	An editable-tone letter home explaining what students are learning and why.
Help sheet	A page students fill in <i>before</i> they need it, listing who they would tell.
Answer key	Full answers, including model responses for the open questions.

HOW LONG IT TAKES

All six lessons run about **4 to 4.5 hours** of class time. Most teachers spread them across six weeks, one lesson a week. You can also pull a single lesson out and run it on its own; nothing depends on anything before it except the vocabulary, which is defined again each time.

Standards Alignment

Use these when you need to justify the time. Copy the codes straight into a unit plan.

ISTE STANDARDS FOR STUDENTS

CODE	STANDARD	LESSONS
1.2.a	Students cultivate and manage their digital identity and reputation and are aware of the permanence of their actions in the digital world.	1, 3
1.2.b	Students engage in positive, safe, legal and ethical behavior when using technology.	3, 4
1.2.d	Students manage their personal data to maintain digital privacy and security.	2, 3, 6
1.3.b	Students evaluate the accuracy, perspective, credibility and relevance of information and media.	5
1.7.b	Students use collaborative technologies to work with others in a respectful way.	4

CASEL COMPETENCIES

COMPETENCY	HOW THE PACK ADDRESSES IT	LESSONS
Self-awareness	Students identify the feeling a message or post creates before they respond to it.	4, 5
Self-management	The ten-second rule and the share pause build a deliberate delay between impulse and action.	4, 5, 6
Social awareness	Students consider how their words land on a reader who cannot see their face.	4
Relationship skills	Students practice asking permission and moving from bystander to upstander.	3, 4
Responsible decision-making	Every lesson ends with a student-authored rule or action step.	All

AASL NATIONAL SCHOOL LIBRARY STANDARDS

SHARED FOUNDATION	ALIGNMENT	LESSONS
Inquire	Students question sources and look for corroboration before accepting a claim.	5
Include	Students consider the perspective of the person on the other side of a message.	4
Curate	Students decide what is worth sharing and what is not.	1, 5
Engage	Students practice ethical use of information about themselves and others.	1, 3

STATE STANDARDS

Most states now require some form of internet safety or media literacy instruction. The lesson objectives on each teacher page are written as observable student behaviors, which makes them easy to map onto whatever wording your state uses. If you need a specific crosswalk, the objectives are the piece to quote.

Pacing Options

Three ways to run the same six lessons. Pick the one that matches the time you actually have.

OPTION A: ONE LESSON A WEEK FOR SIX WEEKS

The version that sticks best. A week between lessons gives students time to notice the thing you named, which is what turns a lesson into a habit. Open each week by asking whether anyone saw last week's idea show up.

OPTION B: ONE INTENSIVE WEEK

DAY	LESSON	NOTE
Monday	Lesson 1: Your Digital Footprint	Sets the frame for everything else.
Tuesday	Lesson 2: Passwords That Actually Work	The most concrete and popular lesson. Good early win.
Wednesday	Lesson 3: Private or Public?	Pairs naturally with Lesson 1.
Thursday	Lesson 4: Kind Online	Allow extra discussion time here if you can.
Friday	Lessons 5 and 6, shortened	Run Lesson 5 pages 1 and 2, then Lesson 6 page 3 and the help sheet.

OPTION C: A SINGLE DAY

Run Lessons 1, 2 and 6. Skip the extension tasks and use the exit tickets as the only written record. This is the version to use for an assembly day, a sub day, or the first week of school.

IF YOU ONLY HAVE ONE PERIOD, EVER

The 45-minute version

- **Minutes 0 to 10.** Lesson 1 opener and the first student page only.
- **Minutes 10 to 25.** Lesson 2 student pages. This is the highest-value single activity in the pack.
- **Minutes 25 to 40.** Lesson 6 scenario cards, discussed as a whole class rather than written.
- **Minutes 40 to 45.** The help sheet at the back. Every student fills it in and keeps it.

SUBSTITUTE FRIENDLY

Every teacher page is self-contained, so a substitute can run any lesson cold. Leave the teacher page and the matching student pages on the desk and nothing else needs explaining.

Before You Teach

This topic reaches into students' actual lives. A few decisions made in advance keep the room safe.

THE DESIGN RULE BEHIND THIS PACK

No page in this pack asks a student to write down a real password, a real account name, a real message they received, or a real person's name. Every scenario is fictional. This is deliberate: worksheets get left on desks, collected, photographed, and taken home. Please keep this rule if you adapt anything.

WHAT TO SAY IN THE FIRST TWO MINUTES

"For the next few weeks we are going to talk about being online. Some of this might remind you of things that have happened to you or to someone you know. You never have to share anything personal in this class. If something comes up that you want to talk about, come and find me afterward and we will sort it out together."

IF A STUDENT DISCLOSES SOMETHING

WHAT YOU HEAR	WHAT TO DO
A student names something that happened to them in front of the class	Thank them, keep your face neutral, and move the conversation back to the general case. Follow up privately after the lesson.
A student writes something concerning on a page	Do not read it aloud or return it to the pile. Follow your school's reporting process the same day.
A student names another student as the person who did something	Stop the naming immediately and kindly. Say that the class talks about behavior, not people. Record it and pass it on.
A student says something that suggests harm to themselves or someone else	This goes to your counselor or designated safeguarding lead the same day, no exceptions and no promises of secrecy.

DO NOT PROMISE CONFIDENTIALITY

If a student says "can I tell you something but you can't tell anyone," the honest answer is that you will keep it as private as you can, but if someone is being hurt you have to pass it on to one specific person whose job it is to help. Say this *before* they tell you, not after.

TWO THINGS WORTH CHECKING WITH YOUR SCHOOL FIRST

- **Your reporting pathway.** Know the name of the person you would go to, today, before you start Lesson 1. Write it on the teacher page.
- **Your device policy.** Some of these lessons discuss platform features. If your school has rules about naming specific apps, the lessons work without naming any.

Before You Teach: Handling the Hard Bits

THE FOUR QUESTIONS STUDENTS ALWAYS ASK

QUESTION	A STRAIGHT ANSWER
"Can hackers get my password from this worksheet?"	No, because nothing on any page asks for a real password. Say this out loud, because a few students will be worried about it.
"What if it already happened to me?"	Say: then you are exactly the right person to be in this lesson, and come and see me afterward. Do not ask them to explain in front of the class.
"My parents let me do that though."	Fair, and families set their own rules. Frame it as: here is what the risk is, and now you and your family can decide with the full picture.
"Is my account already hacked?"	Usually no. Give the practical answer: change the password, turn on two-step verification with a parent, and tell an adult if anything looks odd.

LANGUAGE THAT WORKS, AND LANGUAGE THAT BACKFIRES

INSTEAD OF	SAY
"Never talk to strangers online"	"Never give a person you have not met information that could help them find you"
"The internet is dangerous"	"The internet is useful, and there are a few tricks worth knowing"
"You will regret it forever"	"Things last a long time online, so it is worth thinking first"
"Don't be a tattletale"	"Telling an adult when someone is being hurt is not tattling"
"If you get scammed you were careless"	"Scams are designed by adults to fool adults. Getting caught is not your fault"

WHY THE SCARE APPROACH FAILS

Fear-based internet safety teaching has a poor evidence record. Students either decide the risk is exaggerated and discount everything you said, or they become anxious and stop telling adults anything. Both outcomes make them less safe. Every lesson here is built on **what to do** rather than **what to be afraid of**, which is why the exit tickets ask for an action, not a feeling.

PREPARE THESE THREE THINGS ONCE

1. **The help sheet.** Print one per student now. It is the last student page in this pack and it is the single most useful page in it.
2. **Your reporting name.** One person, first and last name, and where to find them. Students will ask.
3. **A copy of your school's acceptable use policy.** Students in the older lessons will ask what the actual rules are, and it lands better if you can show them.

A word about students who already know this

In every class there are two or three students who are more technically capable than most adults they know. They will be visibly bored by the password lesson. Use them: give them the extension task early, and ask them to explain one idea to the class in their own words. Students who are ahead here are usually ahead precisely because someone once explained it to them well.

Lesson 1: Your Digital Footprint

Students learn that everything they do online leaves a mark, and that they get to choose what kind of mark it is.

Students will be able to

- Explain what a digital footprint is in their own words.
- Name three things that add to a footprint.
- Decide whether a post would be a good or a poor thing to leave behind.

You need

- Student pages 1 to 3
- Board or chart paper
- Pencils

Time: 45 min

THE BIG QUESTION ON THE BOARD

If someone found everything you have ever posted, what would they think you are like?

RUNNING THE LESSON

0 to 5 Wet shoes on a dry floor

Ask: if you walked across the room with wet shoes, could someone tell where you had been after you left? Draw a line of footprints on the board. Say that the internet works the same way, and today you are going to look at the prints.

5 to 12 Build the list together

Ask what makes a footprint online. Take every answer and write it up. You want: posting, commenting, liking, searching, watching a video, playing a game, sending a message, uploading a photo. Circle the ones students are surprised by.

12 to 25 Student page 1 and 2

Students read the short explanation and then trace what a fictional student named Ana left behind on one ordinary Saturday. Circulate. The point they should reach: Ana was not doing anything wrong, and she still left a lot behind.

25 to 37 Student page 3

Students sort actions into **proud to leave behind** and **would rather not**, then write two rules for themselves. Ask three students to read one rule aloud.

37 to 45 Land it

Say the sentence out loud and have the class say it back: **the internet has a very good memory**. Exit ticket 1 at the door.

WORDS STUDENTS NEED

Digital footprint	The trail you leave behind every time you use the internet.
Post	Anything you put online for other people to see.
Permanent	Stays around, even after you delete it. Someone may have already saved a copy.
Reputation	What people think you are like, based on what they have seen you do.

IF THEY NEED SUPPORT

Read the page 1 explanation aloud to the whole class before anyone writes. For the sorting task, cut the items out so students can physically move them into two piles.

IF THEY FINISH EARLY

Ask students to write what Ana's footprint would look like if she had made three different choices. They should name the choice and the change it causes.

WATCH FOR

A student may say that their older sibling or a parent posts photos of them. That is a real and fair observation. The honest answer is that this is why families should ask each other before posting, and it is a good thing to bring up at home.

What Is a Digital Footprint?

Read this first

When you walk on wet sand, you leave footprints. Someone who comes along later can tell that you were there, which way you went, and how big your feet are. They can tell all of that **without ever meeting you**.

The internet works the same way. Every time you post, comment, like, search, watch, or play, you leave a small mark. Put all those marks together and you get your **digital footprint**.

THE PART THAT SURPRISES PEOPLE

You leave footprints even when you are not posting anything. Watching a video leaves a mark. Searching for something leaves a mark. Just opening an app leaves a mark.

QUESTION 1

Write down **four** things you might do online in a normal week that would add to your footprint.

QUESTION 2

A footprint in sand washes away when the tide comes in. Does a digital footprint wash away? Explain why or why not.

QUESTION 3

Imagine a new student joins your class next year. Before they meet you, they look you up online and see your whole footprint. Write **one** thing you would want them to see, and **one** thing you would not.

WOULD WANT THEM TO SEE

WOULD NOT WANT THEM TO SEE

Ana's Saturday

Ana is ten. Here is everything she did online last Saturday. She did not do anything wrong. Read it, then answer the questions.

8:40	Searched for "how to make slime without glue."
9:15	Watched four videos about slime. Liked two of them.
10:30	Posted a photo of her slime. The photo also showed her kitchen and her school bag with her school name on it.
11:00	Commented "this is so bad haha" on a classmate's slime photo. She meant it as a joke.
1:20	Played a game and typed her first name and her age to make an account.
3:45	Searched for "is my dog sick" because her dog was not eating.
6:00	Sent a message to her friend saying she would be at the park at 4pm on Sunday.
8:30	Deleted the slime photo because she decided it looked messy.

QUESTION 1

Ana deleted the photo at 8:30pm. Is it gone? Circle one and explain.

☐ Gone forever ☐ Maybe not gone

QUESTION 2

The photo showed Ana's school bag with her school name on it. Why does that matter?

QUESTION 3

Ana's comment at 11:00 was meant as a joke. Write what her classmate might have thought when they read it, and then write a better comment Ana could have left instead.

WHAT THE CLASSMATE MIGHT HAVE THOUGHT

A BETTER COMMENT

Name: _____ Date: _____

My Footprint, My Choice

PART A: SORT THEM

Write each number in the correct column.

1. Posting a photo of a science project you are proud of 2. Writing "you are so annoying" on a friend's post 3. Sharing a video of someone falling over without asking them 4. Leaving a helpful answer on a question someone asked 5. Posting your street name so a friend can find your house 6. Congratulating a teammate after a game 7. Joining in when everyone is making fun of one person 8. Asking a good question about something you are learning

PROUD TO LEAVE BEHIND	WOULD RATHER NOT

PART B: THE HARD ONE

Number 3 says "sharing a video of someone falling over without asking them." Some people would say that is just funny. Write **one reason** it might not feel funny to the person in the video.

PART C: MY TWO RULES

Write two rules **for yourself** about what you leave behind. Start each one with "I will."

RULE 1

RULE 2

THE TEST

Before you post, ask: **would I be happy if my teacher, my grandma, and the person in the photo all saw this?** If the answer is no to any of the three, do not post it.

Lesson 2: Passwords That Actually Work

Students learn why short passwords fail, how to build a long one they can remember, and what to do if someone finds out.

Students will be able to

- Explain why length matters more than symbols.
- Build a strong passphrase using the four-word method.
- Say what to do if someone else learns their password.

You need

- Student pages 1 to 3
- Board
- Pencils

Time: 45 min

THE BIG QUESTION ON THE BOARD

What makes a password hard to guess, and why is short and clever worse than long and boring?

RUNNING THE LESSON

- 0 to 6** **The race on the board**
Write **Fluffy1** and **correct-lamp-otter-window** on the board. Ask which one a computer would crack first. Most students pick the long one. Tell them it is the opposite, and that today they will find out why.
- 6 to 14** **Length beats cleverness**
Explain that a computer guessing passwords tries millions per second, so being clever does not slow it down. Being **long** does. Every extra character multiplies the work. Four random words is long, and a person can actually remember it.
- 14 to 28** **Student pages 1 and 2**
Students rate six fictional passwords, then build their own passphrase using the four-word method. Say clearly: this is a practice passphrase, do not write down a real one you already use.
- 28 to 38** **Student page 3**
The rules sort and the what-if-someone-knows steps. Read the three steps aloud together at the end.
- 38 to 45** **Land it**
Ask: what is the one word that makes a password strong? Answer: **long**. Exit ticket 2 at the door.

WORDS STUDENTS NEED

Password	The secret word or phrase that proves an account belongs to you.
Passphrase	A password made of several random words. Long, and easier to remember.
Guessing	Trying passwords one after another until one works. Computers can do this very fast.
Account	Your own space in an app or website, protected by your password.

IF THEY NEED SUPPORT

Give students the four word categories in advance: an animal, a color, a piece of furniture, and something in the sky. Random enough, and it removes the blank-page problem.

IF THEY FINISH EARLY

Ask students to work out how many more guesses a 12-letter password needs than a 6-letter one, using only lowercase letters. Rough reasoning is fine. The answer is enormous, and that is the point.

WATCH FOR

Never ask a student to write, say, or type a real password they use. If a student volunteers one out loud, stop them kindly, and tell them privately afterward that they should change it.

What Makes a Password Strong?

Read this first

A computer trying to break into an account does not think. It just guesses, very fast. Millions of guesses every second.

Because it does not think, being **clever** does not help you. Swapping an "a" for an "@" is the first thing the computer tries. What actually helps is being **long**. Every extra letter you add makes the computer's job many times harder.

The easiest way to be long **and** remember it is four random words joined together. Not four words that go together in a sentence. Four words that have nothing to do with each other.

QUESTION 1: RATE THEM

Give each password a score out of 5. Then write why. **None of these are real passwords.**

PASSWORD	SCORE / 5	WHY YOU GAVE THAT SCORE
dog		
P@ssw0rd		
Emma2015		
basketball		
purple-tiger-spoon-cloud		
qwerty123		

QUESTION 2

Emma2015 looks personal, which feels safe. Explain why it is actually one of the weakest on the list.

QUESTION 3

Finish this sentence in your own words: **The most important thing about a password is that it is**

Build a Passphrase

IMPORTANT

The passphrase you build on this page is for **practice only**. Do not write down a password you actually use, on this page or anywhere else. When you get home, you can build a real one the same way.

STEP 1: PICK FOUR WORDS THAT DO NOT GO TOGETHER

One from each box. Do not think too hard. Random is better.

AN ANIMAL	A COLOR	SOMETHING IN YOUR KITCHEN	SOMETHING IN THE SKY

STEP 2: JOIN THEM UP

Write your four words with a dash between each one.

STEP 3: COUNT

How many letters long is your passphrase, including the dashes? Write the number.

Anything over 15 is strong. Anything over 20 is very strong.

STEP 4: THE MEMORY TEST

Cover your passphrase with your hand. Count slowly to ten. Now write it again from memory.

Did you get it right? ☐ Yes ☐ Nearly ☐ No

QUESTION

Why is a passphrase easier to remember than something like Xk7!qP2z, even though both are long?

Password Rules and What If

PART A: TRUE OR FALSE

	STATEMENT	TRUE	FALSE
1	It is fine to use the same password for every account.		
2	Telling your best friend your password proves you trust them.		
3	A longer password is harder for a computer to guess.		
4	Writing a password on a sticky note on your screen is safe.		
5	You should change a password if you think someone else knows it.		
6	Your name and birth year make a strong password.		

PART B: NUMBER 2 IS THE TRICKY ONE

Some people think sharing a password shows trust. Write **one reason** it can go wrong, even between two people who really are good friends.

PART C: SOMEONE KNOWS MY PASSWORD. NOW WHAT?

Put these three steps in the right order by writing 1, 2, 3 in the boxes.

- ☐ Tell a trusted adult what happened, even if you feel embarrassed.
- ☐ Change the password straight away, on that account and on any other account where you used the same one.
- ☐ Check the account for anything you did not do, like messages you did not send.

PART D: THE ONE THAT MATTERS MOST

Of the three steps above, which one do people most often skip? Why do you think that is?

REMEMBER

You are never in trouble for telling an adult that something went wrong with an account. You are only ever in trouble for hiding it until it gets worse.

Lesson 3: Private or Public?

Students learn to sort information into what is safe to share, what depends, and what stays private.

Students will be able to

- Sort personal information into private and shareable.
- Explain why some information is risky in combination even when each piece seems harmless.
- Use a pause-and-ask step before sharing something about themselves or someone else.

You need

- Student pages 1 to 3
- Board
- Pencils

Time: 45 min

THE BIG QUESTION ON THE BOARD

Some things about you are nobody else's business. How do you decide which things?

RUNNING THE LESSON

- 0 to 7** **The strangers-in-a-room opener**
Ask: if a stranger walked up to you in the street and asked what school you go to, would you tell them? Almost everyone says no. Ask why it feels different when it is typed into a box on a screen. Let them sit with that.
- 7 to 14** **One piece is fine, three is a map**
Write on the board: **first name, school shirt in a photo, says she walks home**. Each one alone is harmless. Together they tell a stranger where to find a child at 3:30pm. This is the single most important idea in the lesson.
- 14 to 27** **Student pages 1 and 2**
Students sort information, then examine a fictional profile with too much on it. Ask early finishers to count how many separate clues they found.
- 27 to 38** **Student page 3**
The pause-and-ask steps, including the part about other people's information. Have two pairs read their rewritten caption aloud.
- 38 to 45** **Land it**
Say: **one piece is fine, three pieces is a map**. Exit ticket 3 at the door.

WORDS STUDENTS NEED

Private information	Details that could let a stranger find you, contact you, or pretend to be you.
Public	Anyone can see it, including people you do not know.
Profile	The page that shows information about you in an app.
Permission	Asking first, and accepting the answer if it is no.

IF THEY NEED SUPPORT

Do the sorting task as a whole class on the board first, using four of the twelve items, then let students do the rest independently.

IF THEY FINISH EARLY

Ask students to write a version of the fictional profile that keeps the personality but removes every clue. It is harder than it sounds and it makes the point well.

WATCH FOR

Some students share a lot online with family knowledge and approval. Avoid framing this as those students doing something wrong. The frame is **choosing on purpose**, not **never sharing**.

What Stays Private?

Read this first

Not every piece of information about you is the same. Your favorite color is not a secret. Your home address is. Most things sit somewhere in between, and the answer often depends on **who is asking**.

Here is the part people miss. Sometimes each piece on its own is harmless, but put a few together and a stranger suddenly knows enough to find you. **One piece is fine. Three pieces is a map.**

SORT THESE TWELVE

Write each number in one column. Some are genuinely hard. That is fine.

1. Your favorite band 2. Your home address 3. Your first name 4. A photo in your school uniform 5. Your phone number 6. Your pet's name 7. The time you finish school 8. A drawing you made 9. Your birthday and year 10. Your password 11. The park you play at every Saturday 12. Your opinion about a movie

SAFE TO SHARE	DEPENDS WHO IS ASKING	KEEP PRIVATE

QUESTION 1

You put 6 (your pet's name) somewhere. Explain your choice. Hint: think about what websites ask you when you forget a password.

QUESTION 2

Pick **three** items from the list that would be harmless alone but risky together. Write the three numbers and say what a stranger would learn.

Too Much Information

Here is a made-up profile for a made-up student. Read it, then find every clue a stranger could use.

Name: Jordan M.

About me: I am 10. I go to Riverbend Elementary, Room 12. I walk home by myself every day at 3:15. I have a dog called Biscuit. My best friend is Sam who lives on the same street as me, Maple Street. I do soccer on Tuesdays at Fairview Park.

Photo: Jordan standing in front of a house with the number visible on the door, wearing a school shirt with the school badge on it.

QUESTION 1: CIRCLE THE CLUES

Go back and **circle every single thing** a stranger could use to find Jordan. How many did you find?

QUESTION 2

Write the three clues you think are the **most** risky, and say why for each one.

CLUE	WHY IT IS RISKY

QUESTION 3

Jordan wrote about Sam. Sam did not agree to that. Explain why writing about a friend can be a problem even when you are not saying anything mean.

QUESTION 4: REWRITE IT

Write a new "About me" for Jordan. Keep the personality. Remove every clue.

Pause and Ask

The three questions to ask before you share

- 1 Could this help a stranger find me or contact me? If yes, do not post it.
- 2 Is this about someone else? If yes, ask them first, and accept a no.
- 3 Would I still be fine with this next year? If you are not sure, wait a day.

PRACTICE: RUN THE THREE QUESTIONS

THE SITUATION	Q1	Q2	Q3	POST IT?
You want to post a photo of your birthday cake in your kitchen.				
You want to post a funny photo of your friend mid-sneeze.				
You want to post your drawing of a dragon.				
You want to post that you will be at the pool at 2pm on Saturday.				
You want to post a video of your class, filmed without telling them.				

Write Y or N in each question column, then decide.

THE ONE THAT IS NOT OBVIOUS

Look at the birthday cake photo again. It seems completely safe. Name **one thing** that could accidentally be in the background of a kitchen photo that you would not want a stranger to see.

MY PROMISE ABOUT OTHER PEOPLE

Write one sentence about how you will handle photos and stories that involve your friends.

THE ASKING PART

Asking a friend "is it OK if I post this?" takes about four seconds. Fixing it after they see it and feel awful takes a lot longer. Ask first, every time.

Lesson 4: Kind Online

Students look at how words land without a face or a voice attached, and practice the move from watching to helping.

Students will be able to

- Explain why tone gets lost in text.
- Rewrite an unkind message so it says the same thing kindly.
- Name three ways to help when they see someone being treated badly online.

You need

- Student pages 1 to 3
- Board
- Pencils

Time: 45 min

THE BIG QUESTION ON THE BOARD

Why do words online sometimes hurt more than the same words said out loud?

RUNNING THE LESSON

0 to 7	Say it three ways Write nice job on the board. Say it three ways out loud: sincerely, sarcastically, flatly. Then point at the written words, which never changed. Ask how a reader would know which one you meant.
7 to 15	Why it lands harder Two reasons. First, no face and no voice, so the reader fills in the tone themselves and usually fills in the worst one. Second, it does not disappear. A mean thing said in the yard is over. A mean thing typed can be read again at 11pm.
15 to 28	Student pages 1 and 2 Students rate how messages land, then work through four scenarios choosing an upstander action. Emphasize that doing nothing is one of the options on the page, and it has a consequence too.
28 to 38	Student page 3 Rewrite three unkind messages so they say the same thing kindly. This is harder than it looks and it is where the learning is. Share two out loud.
38 to 45	Land it Ask each student to name one of the three upstander moves without looking. Exit ticket 4 at the door.

WORDS STUDENTS NEED

Tone	The feeling behind words. Easy to hear in a voice, easy to miss in text.
Upstander	Someone who does something to help, instead of just watching.
Screenshot	A picture of what is on a screen. Useful as a record if you need to show an adult.
Block	Stopping someone from contacting you in an app.

IF THEY NEED SUPPORT

For the rewrite task, give a sentence starter: *I think ... but maybe ...* It gets students past the blank page and still requires them to soften the message themselves.

IF THEY FINISH EARLY

Ask students to write the same message three times: too harsh, too soft to be useful, and just right. Naming what makes each one wrong is the real task.

WATCH FOR

This lesson can surface real incidents. Keep the discussion on the fictional scenarios. If a student starts describing something real, thank them, redirect to the general case, and follow up privately after class.

Words Without a Voice

Read this first

When you talk to someone, they get more than your words. They get your face, your voice, and whether you are smiling. That is how they know if you are joking.

Online, all of that disappears. The reader only gets the words, so **they decide the tone themselves**. And when people are not sure, they usually guess the unkind version.

There is a second difference. Something said out loud is over when it is over. Something typed can be read again, and again, at midnight, by someone lying in bed feeling terrible.

HOW DOES IT LAND?

For each message, write what the sender **probably meant**, and what the reader **might think**.

THE MESSAGE	PROBABLY MEANT	MIGHT BE READ AS
"k"		
"nice try lol"		
"why would you even do that"		
"whatever"		
"you always do this"		

QUESTION 1

Which message on the list would be **most** different if you heard it out loud with a friendly voice? Why?

QUESTION 2

Some people say "if they got upset, that is their problem, I was only joking." Write what you think of that, and give a reason.

From Watching to Helping

You will see something unkind online long before it happens to you. Here is what you can do about it.

Three moves that work

- 1 Go to the person, not the fight.** Send the person being picked on a private message. "Hey, that was rough. You OK?" You do not have to argue with anyone.
- 2 Do not feed it.** No likes, no comments, no sharing it on. Every reply makes it bigger, even a reply telling someone off.
- 3 Save it and tell an adult.** Take a screenshot first, then show it to someone who can do something. Telling is not tattling when someone is being hurt.

FOUR SITUATIONS

For each one, write which move or moves you would use, and why.

SITUATION 1

A group chat you are in starts making fun of a boy in your class who is not in the chat. Everyone is laughing. You do not think it is funny.

SITUATION 2

Someone posts an embarrassing photo of your friend and it is getting shared around. Your friend has not seen it yet.

SITUATION 3

Somebody you do not know keeps commenting mean things on your posts. You have asked them to stop and they have not.

SITUATION 4

You realize that something **you** posted last week upset somebody, and they have gone quiet.

Say It Kinder

Being kind is not the same as being fake. You can say the true thing and still say it well.

REWRITE THESE THREE

Keep the meaning. Change how it lands.

THE UNKIND VERSION	SAY THE SAME THING, KINDLY
"That drawing is terrible."	
"You are so slow, hurry up."	
"Nobody wants you on the team."	

THE TRICKY ONE

The third message is the hardest, because there may be no kind way to say it at all. Sometimes the right answer is **do not send it**. Write when you think that is true.

MY RULE FOR THE SEND BUTTON

Write one thing you will check before you send a message when you are annoyed.

CLASS AGREEMENT

Fill in the three blanks. Your teacher may collect these to make a class version.

In this class, when we are online we will always

We will never

If we see someone being treated badly, we will

THE 10-SECOND RULE

If a message makes your chest feel tight, do not reply for ten seconds. Count them. Almost every message people regret was sent inside that ten seconds.

Name: _____ Date: _____

Lesson 5: Is It Real?

Students learn three quick checks to run before they believe or share something they see online.

Students will be able to

- Apply three checks to something they see online.
- Explain why a post looking professional does not make it true.
- Pause before sharing something that made them feel a strong emotion.

You need

- Student pages 1 to 3
- Board
- Pencils

Time: 45 min

THE BIG QUESTION ON THE BOARD

How can you tell the difference between something true and something that just looks true?

RUNNING THE LESSON

0 to 8	The believable lie Tell the class a made-up fact in a confident voice, for example that the average person swallows eight spiders a year while sleeping. Most will believe it. Reveal that it is not true, and that you said it confidently and that was all it took.
8 to 16	The three checks Put them on the board and leave them there: Who made it? Why did they make it? Who else says so? Everything else in this lesson hangs off those three questions.
16 to 30	Student pages 1 and 2 Students learn the checks, then apply them to four fictional posts. The fourth post is designed to be genuinely hard, which is the point: sometimes the honest answer is I cannot tell yet .
30 to 39	Student page 3 The share pause and the poster design. The poster is the artifact worth putting on the wall.
39 to 45	Land it Ask the three checks as a call and response. Exit ticket 5 at the door.

WORDS STUDENTS NEED

Source	Who made the thing you are looking at.
Evidence	The proof that something is true.
Edited	Changed from the original. Photos and videos can be changed easily.
Viral	Shared very widely, very fast. Popular does not mean true.

IF THEY NEED SUPPORT

Do post 1 together as a class, filling in the answer boxes on the board. Students then do posts 2 and 3 and skip post 4.

IF THEY FINISH EARLY

Ask students to write a fifth fake post that would fool their classmates, then explain exactly which check would catch it.

WATCH FOR

Avoid using real current news examples. They date quickly, and a student may have a family member with strong views on the topic, which turns a skills lesson into an argument.

Three Checks

Read this first

Anyone can make something online look real. Nice fonts, a confident voice, a photo, thousands of likes. None of that is evidence.

Before you believe something, and definitely before you share it, run three quick checks. They take about twenty seconds.

CHECK 1: WHO MADE IT?

Is there a name? Is it someone who would actually know about this? An account called TrueFactsDaily99 is not a scientist.

CHECK 2: WHY DID THEY MAKE IT?

To inform you, to sell you something, to make you angry, or to get clicks? Things designed to make you feel a big feeling fast are usually built to be shared, not to be true.

CHECK 3: WHO ELSE SAYS SO?

If something big really happened, more than one place will report it. If you can only find it in one post, be suspicious.

QUESTION 1

A post has 40,000 likes. Does that make it true? Explain.

QUESTION 2

Check 2 asks **why** someone made something. Give an example of a reason someone might post something that is not quite true, even if they are not trying to be evil.

QUESTION 3

Which of the three checks do you think people skip most often? Why?

Run the Checks

Four made-up posts. Run all three checks on each one and write your verdict.

POST A

@ScienceZone_Facts: "SHOCKING: Scientists say homework causes children to shrink. Share before this gets deleted!!!"
Posted with a photo of a very short child. 200,000 likes.

WHO MADE IT?	WHY?	WHO ELSE SAYS SO?	VERDICT

POST B

Your city library's official account posts: "Our Riverside branch will be closed next Monday for repairs. Books can be returned to the Fairview branch."

WHO MADE IT?	WHY?	WHO ELSE SAYS SO?	VERDICT

POST C

A photo of a shark swimming down a flooded street after a storm. Caption: "Unbelievable! This is really happening right now."
Shared 900,000 times.

WHO MADE IT?	WHY?	WHO ELSE SAYS SO?	VERDICT

POST D

A person you do not know posts that a certain snack is being recalled because it made people sick. There is no photo and no link, but they say their aunt works at the factory.

WHO MADE IT?	WHY?	WHO ELSE SAYS SO?	VERDICT

Question: Post D is the hardest. It might even be true. Write what you would **do** about it, given that you cannot tell yet.

The Share Pause

Read this first

The most shared things online are the things that make people feel something **fast**. Angry, scared, amazed, outraged. That is not an accident. If a post gives you a big feeling in the first two seconds, that is exactly the moment to slow down.

THE PAUSE, IN FOUR STEPS

- 1 Notice the feeling. Name it: angry, scared, amazed.
- 2 Ask who benefits if you share this.
- 3 Run the three checks.
- 4 If you still cannot tell, **do not share it**. Not sharing costs you nothing.

QUESTION 1

Someone shares something false without knowing it is false. Have they done something wrong? Explain your thinking.

QUESTION 2: DESIGN A POSTER

Design a poster for your classroom that teaches the three checks. Use words **and** pictures.

Lesson 6: Tricks and Traps

Students learn the shapes that online tricks always take, and exactly what to do when something feels wrong.

Students will be able to

- Name the three signals that appear in almost every online trick.
- Identify a trick in a message they have not seen before.
- State the four steps to take when something online feels wrong.

You need

- Student pages 1 to 3
- The help sheet from the back of this pack
- Pencils

Time: 45 min

THE BIG QUESTION ON THE BOARD

What do all online tricks have in common, and what is your first move when you spot one?

RUNNING THE LESSON

0 to 8	The shape of a trick Ask what a trick in real life looks like. Steer toward: someone offers something free, rushes you, and asks you to keep it quiet. Write those three on the board. Tell them every online trick they will ever meet uses at least one.
8 to 16	Free, fast, secret Walk through each signal with an example. Free means the reward does not match the effort. Fast means you are being rushed so you do not think. Secret means they do not want an adult involved, which is the biggest signal of all.
16 to 30	Student pages 1 and 2 Students learn the signals, then find them in six fictional messages. Do the first one together.
30 to 40	Student page 3 and the help sheet The four steps, then hand out the help sheet from the back of the pack. Every student fills it in now, in class. Do not send it home blank.
40 to 45	Land it Say the four steps as a class: Stop. Do not reply. Save it. Tell someone. Exit ticket 6 at the door.

WORDS STUDENTS NEED

Scam	A trick designed to take something from you: money, information, or an account.
Urgent	Made to feel like you have to act right now. A very common trick signal.
Too good to be true	An offer so good that it almost certainly is not real.
Report	Telling the app, and telling an adult, that something is wrong.

IF THEY NEED SUPPORT

Reduce the six messages to three, and read each one aloud before students annotate it.

IF THEY FINISH EARLY

Ask students to write a trick message that uses all three signals at once, then swap with a partner to find them.

WATCH FOR

A student may realize during this lesson that something has already happened to them. Watch for a student who goes quiet or stops writing. Check in privately at the end of the period rather than in front of the class.

Free, Fast, Secret

Read this first

Online tricks look different every time, but they are all built from the same three parts. Once you know the three, you can spot a trick you have never seen before.

SIGNAL 1: FREE

You are offered something valuable for almost nothing. Free game money, a free prize, a giveaway you never entered. Real things cost something. If the reward does not match the effort, stop.

SIGNAL 2: FAST

You are told to act **right now**. Offer ends in ten minutes. Your account will be deleted today. Rushing you is the whole point, because a person in a hurry does not check anything.

SIGNAL 3: SECRET

You are told not to tell anyone, especially a parent or a teacher. This is the strongest signal there is. **Nothing good ever requires you to keep it from a trusted adult.**

QUESTION 1

Why do you think tricks try to make you hurry?

QUESTION 2

Signal 3 is the strongest one. Explain in your own words why someone honest would never ask you to keep something secret from your parents or your teacher.

QUESTION 3

Someone says they will give you 10,000 free coins in a game if you tell them your username and password. Which signals are in that message? Write all that apply and explain.

Spot the Trick

Six made-up messages. For each, write which signals you can see: **F** for free, **A** for fast, **S** for secret. Then write your move.

THE MESSAGE	SIGNALS	WHAT YOU WOULD DO
"Congratulations! You are our 1,000,000th visitor! Claim your prize in the next 5 minutes."		
"Hi, this is your school. Your account has a problem. Send us your password to fix it."		
"I can get you free skins but you cannot tell your mom, she will ruin it."		
"Hey! It is me, your cousin. I got a new number. Can you send me a gift card code quickly?"		
"You have been chosen for a special test. Turn your camera on. Do not tell anyone, it is a surprise."		
"Your library book is due Thursday. Renew online or at the front desk."		

QUESTION 1

One of the six is **not** a trick. Which one, and how do you know?

QUESTION 2

Message 4 pretends to be someone you know. Write **one thing** you could do to check whether it is really them.

QUESTION 3

Message 5 is the most serious one on this page. Write what you would do, and say who you would tell.

When Something Feels Wrong

The four steps

- 1 STOP.** Put the device down. Do not click anything else. The rush is part of the trick, so refusing to rush breaks it.
- 2 DO NOT REPLY.** Not even to say no. Replying tells them a real person is there.
- 3 SAVE IT.** Take a screenshot. You will need it when you show an adult, and it is much harder to explain from memory.
- 4 TELL SOMEONE.** A parent, a teacher, any adult you trust. This is the step people skip, and it is the one that actually fixes things.

WHY PEOPLE SKIP STEP 4

Most people who get tricked online do not tell anyone, because they feel embarrassed. Write what you would say to a friend who felt too embarrassed to tell an adult.

PRACTICE THE SENTENCE

Telling an adult is easier if you have already decided what to say. Fill in the blank and read it once to yourself.

"Something happened online and I need help with it. Can I show you?"

Write your own version:

MY THREE PEOPLE

Write three adults you could say that sentence to.

WHO	WHERE I WOULD FIND THEM

THE PROMISE

You will never be in trouble for telling an adult that something went wrong online. Not ever. The only thing that makes it worse is waiting.

Skills Rubric

One rubric for all six lessons. Circle a level per row, or use it as a self-assessment.

SKILL	BEGINNING	DEVELOPING	SECURE	STRONG
Protecting my information	Shares personal details without thinking about it.	Knows some details are private but is unsure which.	Sorts information correctly and gives a reason.	Spots risk in combinations of harmless-looking details.
Account safety	Uses short or obvious passwords.	Knows passwords should be long but cannot explain why.	Builds a strong passphrase and explains length.	Explains reuse risk and knows the recovery steps.
Kindness online	Sends messages without considering the reader.	Recognizes unkindness after it is pointed out.	Rewrites a message so it lands better.	Acts as an upstander and can name three moves.
Checking information	Believes what looks or sounds convincing.	Knows some things online are false.	Applies the three checks to a new post.	Says "I cannot tell yet" and explains what is missing.
Knowing what to do	Would not tell anyone if something went wrong.	Would tell someone eventually.	Names the four steps and a trusted adult.	Would act immediately and help a friend do the same.

HOW TO USE IT WITHOUT CREATING MARKING

- **Pick two rows, not five.** Assess the two skills the lesson actually taught. Leave the rest blank.
- **Have students circle first.** Then you circle. The conversation is about the gap between the two, and it takes thirty seconds per student.
- **Use it twice.** Once after Lesson 2 and once at the end. The movement between the two is the evidence, not the final score.

REPORTING LANGUAGE

Useful phrases: *can explain what a digital footprint is and give examples, builds and justifies a strong passphrase, identifies risk in combined personal information, rewrites a message to change how it lands, applies source checks before accepting a claim, knows the steps to take and the adults to tell.*

Exit Tickets

Cut along the dashed lines. One ticket per student per lesson. Collect at the door.

Exit Ticket — Lesson 1

Write one thing you will do differently because of today's lesson about digital footprints.

Exit Ticket — Lesson 2

What is the single most important thing about a password? Answer in one word, then explain in one sentence.

Exit Ticket — Lesson 3

Name two pieces of information you will keep private from now on.

Exit Ticket — Lesson 4

Write one thing you can do if you see someone being treated badly online.

Exit Ticket — Lesson 5

Name the three checks. Which one will you use most?

Exit Ticket — Lesson 6

Write the four steps for when something feels wrong online.

Letter Home

Print, add your school letterhead, and send. The tone is deliberately calm rather than alarming.

Dear families,

Over the next few weeks your child is learning about being safe online. We are covering six things: what a digital footprint is, how to build a strong password, what information to keep private, how to be kind in messages, how to check whether something online is true, and how to spot a trick.

Two things worth knowing. First, we do not use scare stories. Children who are frightened about the internet tend to hide problems rather than report them, and that makes them less safe. Second, no worksheet asks your child to write down a real password or any real personal information.

One thing to do at home: ask your child to name three adults they would tell if something went wrong online. If you are one of the three, tell them you are glad. If you are not, that is worth a gentle conversation.

The most useful message you can give at home is the one we are giving at school: **you will never be in trouble for telling us that something went wrong.** Children hide problems because they expect to lose their device. Knowing they will not is what gets them to speak up early.

Please get in touch if you have any questions, or if you would like to know more about what we covered.

With thanks,

Teacher name and contact

WHY THIS LETTER IS SHORT

Long safety letters get skimmed. This one does three things only: says what is being taught, gives one thing to do at home, and names the fact that families can ask questions. That is the maximum that reliably gets read.

IF A FAMILY ASKS FOR MORE

THEY ASK	A SHORT ANSWER THAT WORKS
"Are you teaching them about things they have not even heard of yet?"	No. Every topic here is one students already meet. The lessons name it rather than introduce it, which is what lets a child recognize it later.
"Should I be reading their messages?"	That is a family decision, not a school one. What helps most in either case is that a child expects to be helped rather than punished when they report a problem.
"What if we do not allow devices at home?"	The lessons still apply. Students use school devices, friends' devices, and eventually their own. The habits transfer.
"Can I see the materials?"	Yes, and say yes readily. Every page is printable and there is nothing in the pack you would not want a family to read.

My Help Sheet

Fill this in **now**, while nothing is wrong. Then fold it and keep it somewhere you will find it.

THREE ADULTS I COULD TELL

One at home, one at school, one anywhere else. Write the name and how you would reach them.

1.

2.

3.

AT MY SCHOOL, THE PERSON WHOSE JOB THIS IS

Your teacher will give you this name.

Three things that are always true

- **You will never be in trouble for telling.** Not for what you clicked, not for what you said, not for how long you waited.
- **It is not your fault.** Online tricks are designed by adults who do this for a living. Getting caught by one does not mean you were careless.
- **Telling early makes it smaller.** Almost every online problem gets easier to fix the sooner an adult knows.

FREE HELP LINES

IF THIS IS HAPPENING	WHO TO CONTACT
Someone is being unkind or threatening online	Report it in the app, screenshot it, tell a trusted adult the same day.
Someone you do not know is trying to contact you	Do not reply. Block them, then show an adult straight away.
You feel worried or scared about something online	Tell one of the three adults on this page. If you cannot reach them, tell any teacher.
Something happened and you are not sure if it counts	Tell someone anyway. Adults would rather hear ten small things than miss one big one.

THE ONE SENTENCE TO REMEMBER

If something online makes you feel worried, tell a grown-up you trust. Today, not later.

Answer Key

Model answers, not the only answers. For open questions, accept any response that meets the criterion named in bold.

LESSON 1: YOUR DIGITAL FOOTPRINT

PAGE AND QUESTION	MODEL ANSWER
P1 Q1	Any four of: posting, commenting, liking, searching, watching a video, playing an online game, sending a message, uploading a photo, opening an app. Criterion: four distinct online actions.
P1 Q2	No. Copies may already be saved, screenshotted, or stored by the company, so deleting removes it from your view but not necessarily from the world. Criterion: names that others may hold a copy.
P2 Q1	Maybe not gone. Someone could have screenshotted it in the ten hours it was up, and the company still holds it. Criterion: identifies that time-online creates copies.
P2 Q2	The school name tells a stranger where Ana is every weekday, which combined with anything else narrows down where to find her.
P2 Q3	Accept any answer where the classmate reads it as an insult, plus a rewritten comment that is clearly positive or neutral.
P3 Part A	Proud: 1, 4, 6, 8. Would rather not: 2, 3, 5, 7.
P3 Part B	The person in the video did not choose to be filmed or shared, and being laughed at by people you do not know feels different from a friend laughing with you.

LESSON 2: PASSWORDS THAT ACTUALLY WORK

PAGE AND QUESTION	MODEL ANSWER
P1 Q1	Rough scores: dog 1, P@ssw0rd 1, Emma2015 2, basketball 2, purple-tiger-spoon-cloud 5, qwerty123 1. Criterion: length drives the score, not symbols.
P1 Q2	It uses a real name and a real year, both of which are easy to find out or guess, and it is short. Personal does not mean private.
P1 Q3	Long. Accept any wording that puts length first.
P2 Step 3	Any count. Over 15 is strong, over 20 is very strong.
P2 Question	Because your brain remembers pictures and meaning, not random symbols. Four words make four small images.
P3 Part A	1 False. 2 False. 3 True. 4 False. 5 True. 6 False.
P3 Part B	Friendships change; the friend may tell someone else, may be careless, or may have their own account broken into. None of these require them to be a bad friend.
P3 Part C	Order: change the password (1), check the account (2), tell an adult (3). Accept telling an adult first if justified.
P3 Part D	Telling an adult, because of embarrassment or fear of losing the device.

Answer Key (continued)

LESSON 3: PRIVATE OR PUBLIC?

PAGE AND QUESTION	MODEL ANSWER
P1 Sort	Safe: 1, 8, 12. Depends: 3, 4, 6, 9. Private: 2, 5, 7, 10, 11. Accept 4 and 7 in the private column with reasoning.
P1 Q1	Pet names are common answers to password recovery questions, so sharing one can help someone break into an account.
P1 Q2	Best combination is 4, 7, 11: uniform, finish time, and regular park. Together they give a stranger a place and a time.
P2 Q1	Ten or more clues: age, school name, room number, walks home alone, time, dog's name, best friend's name, street name, sport, day, park, house number, school badge.
P2 Q3	Sam did not agree to have their name and street published, and Jordan has now shared information about someone who cannot take it back.
P3 Practice	Cake: Q1 probably N, Q2 N, Q3 Y, so post. Sneeze photo: Q2 Y so ask first. Dragon drawing: post. Pool at 2pm: Q1 Y, do not post. Class video: Q2 Y, do not post without permission.
P3 Not obvious	Mail with an address, a school timetable on the fridge, a house number through a window, a family photo, a visible street sign.

LESSON 4: KIND ONLINE

PAGE AND QUESTION	MODEL ANSWER
P1 Table	Accept any reasonable pairing. The learning is that the two columns are different, not that a particular reading is correct.
P1 Q1	Usually "nice try lol" or "k". Both are neutral out loud and cold in text.
P1 Q2	Criterion: recognizes that the sender's intention does not control the reader's experience , while allowing that the sender is not automatically a bad person.
P2 Situations	1: moves 1 and 2, plus 3 if it continues. 2: move 3 first because it is spreading, then move 1. 3: move 3, plus blocking. 4: apologize directly and privately, without an audience.
P3 Rewrites	Model answers: "I like the colors, the shape is a bit hard to read." "Are you nearly ready? We are waiting on you." For the third, accept "do not send it" as the correct answer.
P3 Tricky one	When the message has no purpose except to make someone feel bad, there is no kind version. Not sending is the answer.

MARKING NOTE FOR THESE TWO LESSONS

Lessons 3 and 4 produce the widest spread of answers in the pack, because both ask students to weigh a situation rather than recall a fact. Resist marking for the answer you had in mind. What you are looking for is whether the student named a **reason**, and whether the reason holds. A student who reaches an unexpected conclusion with sound reasoning has done the harder thinking.

Three responses worth reading aloud

- **The best privacy sort.** Any student who put an item in a different column from everyone else and defended it well. It shows the sorting is a judgment, not a key.
- **The rewritten profile.** Read two. Students hear immediately which one kept the personality and which one turned into a form.
- **The kindest rewrite.** Read the one that stayed honest. Students often assume kind means dishonest, and hearing a counterexample fixes that faster than explaining it.

Answer Key (continued)

LESSON 5: IS IT REAL?

PAGE AND QUESTION	MODEL ANSWER
P1 Q1	No. Likes measure how many people shared or reacted, not whether it is accurate. False things often spread faster because they are more surprising.
P1 Q2	To get clicks or followers, to sell something, to be first, to be funny, or because they believed it themselves and passed it on.
P1 Q3	Usually check 3. Accept any answer with a reason.
P2 Post A	Fake. Anonymous account, designed to shock, no other source, urgency language ("share before this gets deleted").
P2 Post B	Likely true. Official account, useful purpose, easily checked by calling the library.
P2 Post C	Almost certainly fake or from a different event. Shark-in-street photos are a recurring hoax. No source, huge emotional pull.
P2 Post D	Cannot tell. The correct verdict is uncertain. The right action is not to share it, and to check whether an official recall notice exists.
P3 Q1	Criterion: distinguishes intention from effect. They may not have meant harm, but the false information still spread, and they had the ability to check first.

LESSON 6: TRICKS AND TRAPS

PAGE AND QUESTION	MODEL ANSWER
P1 Q1	Because someone in a hurry does not stop to check or to ask an adult. Rushing removes thinking.
P1 Q2	An honest offer survives being checked. Only a trick needs to avoid adults.
P1 Q3	Free (the coins) and often fast. Never give a password to anyone, for anything, ever.
P2 Table	1: F, A. 2: A, plus impersonation. Schools never ask for passwords. 3: F, S. 4: A, S, impersonation. 5: S, and the most serious. 6: none, genuine.
P2 Q1	Message 6. It asks nothing of you, has no urgency, offers nothing free, and gives an ordinary offline option.
P2 Q2	Contact the cousin on the number you already have, or ask a parent to check. Never verify using the details in the suspicious message itself.
P2 Q3	Do not turn the camera on, do not reply, screenshot, tell a trusted adult immediately. Always goes to an adult.
P3 Why people skip	Criterion: names embarrassment or fear of losing the device, and offers reassurance.

IF YOU ONLY MARK ONE THING

Mark the Lesson 6 page 3 responses. A student who cannot name an adult they would tell is the student this whole pack exists for.

Thank You

Built by a classroom teacher who still teaches this every year.

If this worked in your room

- **Leaving feedback earns you TPT credits** toward future purchases, and it genuinely helps other teachers find the pack.
- **Found a typo or a thing that did not land?** Message me through TPT. I fix things and re-upload, and you get the update free.
- **Follow the store** to hear when new packs go up. New resources are half price for the first 24 hours.

MORE FROM DIGITAL VECTOR

PACK	GRADES	GOOD FOR
Digital Citizenship & Online Safety	6 to 8	The middle school version of this pack, with passkeys, data trails, and deepfakes.
Digital Citizenship & Online Safety	9 to 12	The high school version, covering reputation, consent, fraud, and algorithms.
AI Explorers: AI Literacy	3 to 5	What AI is, how it gets things wrong, and how to use it honestly.
Emergency Sub Plans	Various	Full-day, no-prep plans for the day you cannot be there.

THREE THINGS WORTH DOING AFTER THIS PACK

- **Put the help sheet somewhere permanent.** Inside a folder, on the inside of a locker door, in the back of a planner. It only works if it is findable in the moment it is needed.
- **Revisit one idea a month.** Two minutes at the start of a period. Ask what students have noticed since. This is what turns six lessons into a culture.
- **Tell your colleagues the reporting name.** The most common failure in a school is not that students do not report, it is that the adult they told did not know where to send it.

TERMS OF USE

This purchase licenses **one teacher** to use these materials with their own students. You may print as many copies as you need for your own classes and share the pages with your students and their families. You may not resell, redistribute, or post this file on a public website or shared drive outside your classroom. Additional licenses for colleagues are available at a discount from your TPT purchase page.

Clarence Goh has taught digital technologies for over twenty years. Digital Vector resources are written to be run by any teacher, in any room, with a printer and nothing else.
